PORTFOLIO

DESIGNED BY VICTORIA WANG

CONTENTS

DAISY WORLD

- 2-player Board Game
- A game setting based on the scientific theory of the Gaia hypothesis
- Complete board game prototype

JULIA

- 2D Puzzle Game
- Using a special way of collecting words
- Fragmented narrative style
- Completed demo

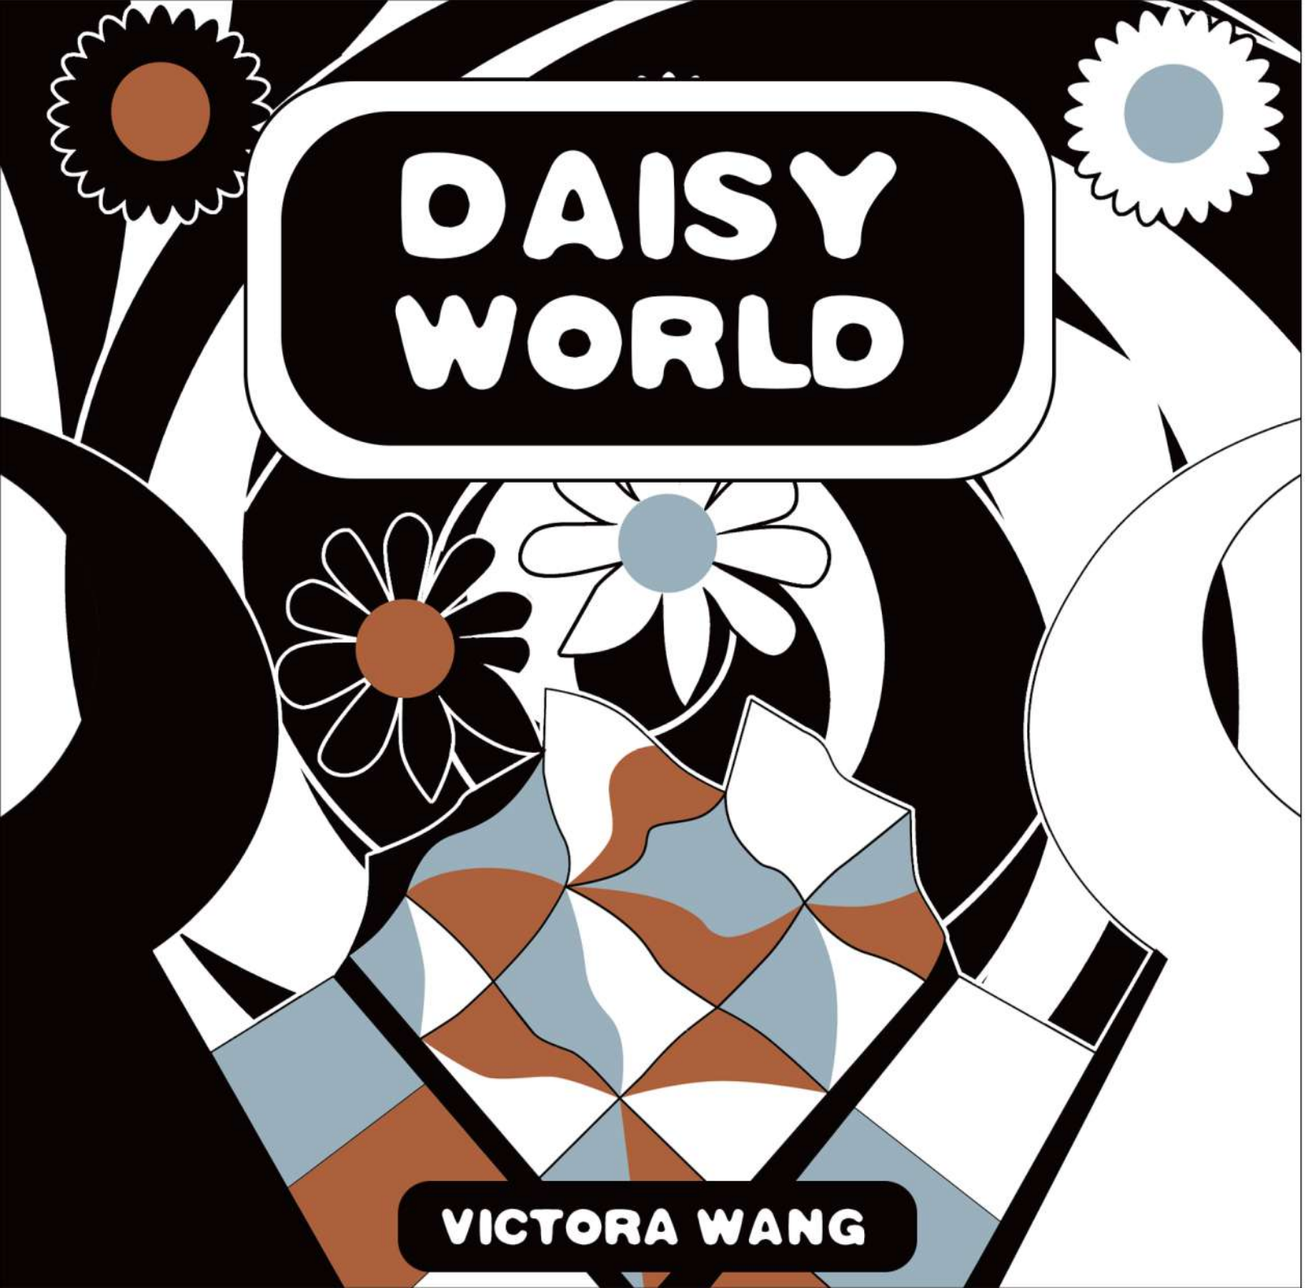

MAYFLY

- Chinese-style Roguelike Game
- The Artistic Style of Lacquer Painting
- A combat system inspired by Chinese metaphysics
- Character design and art asset concepts

LIGHTHOUSE

- 3D Psychological Horror Adventure Game
- Create an eerie storytelling atmosphere through mutually contradictory rules
- Level conceptualization and scene Modeling

BY VICTORIA WANG

A BOARD GAME

DAISY WORLD

Designed by VICTORIA WANG

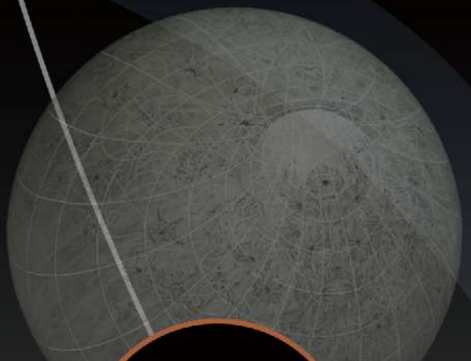

In this world, two mysterious plants hold the power to shape the climate's temperature. Choose one to cultivate and watch as the climate shifts. Will the changing world favor your growth, or will it test your strategy?

Adapt, expand, and guide your plant toward its perfect environment—only the most skillful gardener will thrive!

For the digital version, please visit: https://victoria-wang.itch.io/daisyworld
For the introduction video, please visit: https://youtu.be/4n6pi1tc-Ns

INSPIRATION

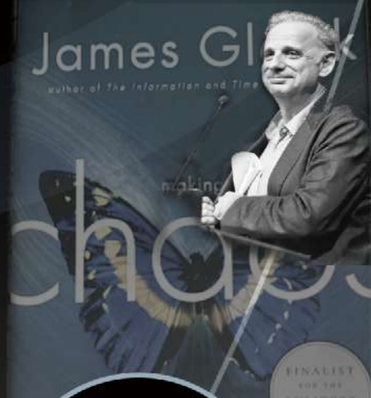

The Daisyworld model is a simplified representation of an ecological system created by James Lovelock and Andrew Watson as an illustration of **the Gaia hypothesis**, which posits that life interacts with the physical environment to create a self-regulating, stable climate conducive to sustaining life. In the model, **a hypothetical planet's temperature** is regulated by **the albedo effect** of two types of **daisies**—black and white—that either absorb or reflect heat, demonstrating how life-forms can collectively maintain equilibrium within an ecosystem.

ARTWORKS OF CAROL PRUSA

Carol Prusa creates a new vision of the powers of the universe in each artwork she makes. Inspired by cosmology and all of the **natural sciences**, Prusa creatively explores these practices, arriving at pictorially stunning re-interpretations of their theories.

Chaos theory is one of the important scientific knowledge of our time, heralding a new wave of human thought. The science writer Gleick, with his profound scientific literacy, elucidates the mysteries of chaos theory in an accessible manner. The book **CHAOS: MAKING A NEW SCIENCE** is Gleick's breakout work and a classic in the field of popular science on chaos theory.

A BOOK BY JAMES GLEICK

The Mandelbrot set is a geometric figure that was once called **the fingerprint of God**. It was discovered by Professor Mandelbrot in the seventies of the twentieth century.

MANDELBROT SET

GAIA HYPOTHESIS AND DAISY WORLD

ARTWORKS OF DANIEL OST

Daniel Ost is known worldwide as a leading floral house that brings art and nature together. With an unwavering commitment to creativity and craftsmanship, they design **floral masterpieces** that evoke emotions and tell stories.

SET UP

① PLANTING BOARD
The planting board representing the world of daisies is divided into 16 square areas, unfolded, and placed with the colored side facing up.

② TEMPERATURE PIECE
Place the temperature pieces on the black dots along the edge of the board.It represents the current temperature in the Daisy World.

③ CARDS
Shuffle the cards and place them face down. Each person will be given 1 card at the start, with each side having a maximum of 5 cards. Each side can draw up to 3 cards per turn.

④ WHITE DAISY PIECES
White daisies thrive in high temperatures, but planting them will cause the temperature to decrease. Each time a white daisy is planted/removed, the temperature decreases/increases by 2 ℃ .

⑤ BLACK DAISY PIECES
Black daisies thrive in low temperatures, but planting them will cause the temperature to increase. Each time a black daisy is planted/removed, the temperature increases/decreases by 2 ℃ .

⑥ ACTION POINT TOKENS
Tokens used to count action points. Each turn, both sides receive 2 action points. Planting daisies, removing daisies, drawing cards, and playing cards each consume 1 action point. Each card discarded earns 1 action point.

⑦ CARD SLOTS
The numbers at the bottom of the board are used to record the number of turns that the cards are effective.

⑧ SQUARE AREAS
The colors of the square areas symbolize the climate of the areas. Areas with blue are suitable for the growth of black daisies, areas with orange are suitable for the growth of white daisies, and areas with both colors are suitable for the growth of both types of daisies. Daisies of the same type in the same square can remove each other. When a square contains 3 daisies of the same type, it is considered fully occupied, and no new daisies can be planted on that area.

⑨ TEMPERATURE SCALE
The temperature scale records the temperature of the Daisy World, with each mark representing 1° C. The orange direction indicates rising temperatures, while the blue direction indicates falling temperatures. The upper edge marks the neutral temperature range; when the temperature token is here, both types of daisies can be planted. The left edge/right edge represents high/low temperature zones, where black daisies/white daisies cannot be planted.

SYSTEM DESIGN

CARD SYSTEM

At the start of the game, each player will receive a card. After that, **drawing and playing** cards will **cost action points**, while **discarding** cards can **gain action points.**

INFLUENCE TEMPERATURE

Some cards can directly **raise or lower the temperature**, and there is a card that can **remove the temperature effects** generated by the opponent in the previous turn.

INFLUENCE DAISIES

There is a card that can **remove daisies** without generating a temperature effect, and some cards can **amplify or reverse the temperature effects** produced during planting.

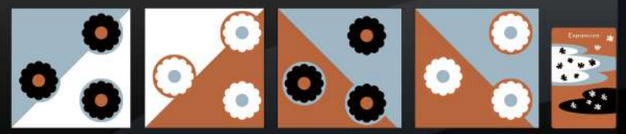

DISCARD

Each **card discarded** can get **1 action point**, drawing and playing cards consume **1 action point**, each person can draw a card up to **3 times** per turn, and at the end of the round, there shall be no more than **5 cards** in hand.

INCREASE ACTION POINTS

There is a card that can be used with daisy planting to gain **extra action points**. If you play the card Expansion, you will gain **1 more action point** for every **1 suitable area** your daisies **fully occupied** (the orange areas corresponding to white daisies while the blue areas corresponding to black daisies).

ACTION POINTS SYSTEM

At the start of each round, both sides will receive **2 action points**, and any unused action points from the previous round can **be carried over** to the next round.

VICTORY CONDITIONS 1

When the temperature piece reaches **the orange end**, **the white daisies** wins; When it reach **the blue end**, **the black daisies** wins.

VICTORY CONDITIONS 2

When the temperature piece is on the **left edge** and there are **no black daisies** on the field, **the white daisies** win; When the temperature piece is on the **right side** and there are **no white daisies** on the field, **the black daisies** win.

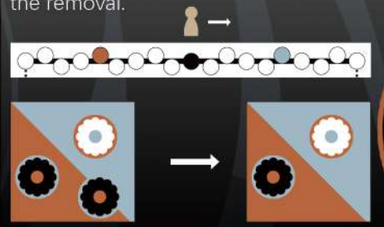

PLANT REMOVE

Planting or removing 1 daisy consumes **1 action point**. For each **white daisy planted**, the temperature **decreases by 2 ℃** , while for black daisies, it's the opposite. Generally, you can remove any of **your own daisies**. Each **white daisy** removed **increases** the temperature by 2 ℃ , while black daisies have the opposite effect.

INTERSPECIFIC COMPETITION

When your daisy and the opponent's daisy are in the **same square area**, you can spend **1 action point** to remove **1 of the opponent's daisies** in that area and calculate the temperature effect caused by the removal.

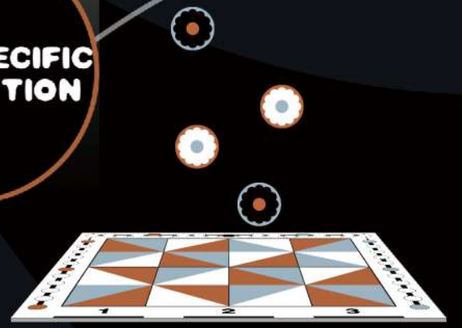

INCREASE ACTION POINTS

When a square contains 3 daisies of the same type, it is considered **fully occupied**. At this time, when combined with certain cards, you can gain a **temperature boost**. When the fully controlled area is a **suitable area**, the boost effect will expand, and you can also gain **action points** by using **Expansion**.

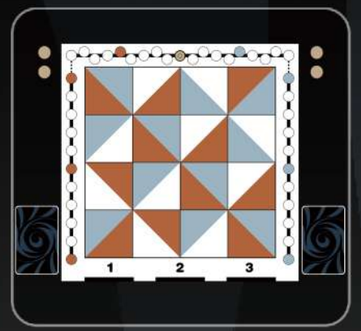

PIECES SYSTEM

The board is divided into 16 square areas, and each area can hold up to **3 daisies**. **Planting and removing** daisies both **consume action points**. For **white daisies planted**, the temperature **decreases**, while for black daisies, it's the opposite.

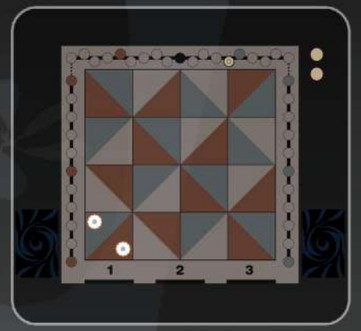

GAME PROCESS

Round 1

Before the first round begins, both sides decide who goes first by playing rock-paper-scissors. White Daisy goes first. After the first round begins, both sides receive one card and two action points, and the temperature chess piece is in a neutral position.

The white side chooses to plant 2 white daisies, and the temperature piece moves 4℃ toward low temperature.

The black side chooses to plant 1 black daisy, and the temperature piece moves 2℃ toward high temperature. Then, the black plays a card Drought/Frost, and the temperature piece moves 5℃ toward low temperature.

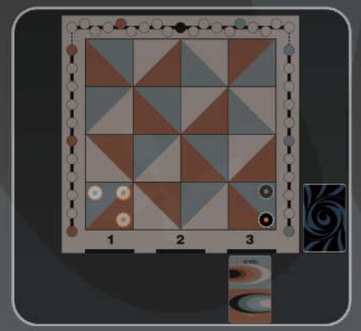

Round 2

The white side discards a card Expansion and gains 1 action point.

The white side draws a card and plays a card El Niño, and has 1 action point remaining. Then, the white side plants 1 white daisy, and due to the El Niño effect, the temperature piece moves 2℃ toward high temperature.

The black side draws 1 card and plants 1 black daisy. Due to the El Niño effect, the temperature piece moves 2 ℃ toward low temperature.

Round N

The white side discards 3 cards and gains 3 action points.

The white side removes 1 black daisy and plants 1 white daisy, and due to the El Niño effect, the temperature piece moves 4 ℃ toward high temperature.

The white side plays a Dought/Frost card, causing the temperature to rise by 5 ℃. After that, the white side plays a Hurricane card, removing all daisies from the 2×2 square in the lower right corner. With the temperature in the high range and no black daisies on the field, the White

ESTABLISH THE BASIC SETTINGS AND RULES

1. Game Board: 6x6 grid, each square can plant 3 daisies.

2. Pieces and Temperature System: The global temperature determines the survival conditions for both daisies, ranging from -10 ° C to +50 ° C, with an initial temperature of 20 ° C (neutral state). Temperature changes are triggered by planting/removing either black or white daisies. Each planted black/white daisy +/- 2 ° C, while each removed daisy -/+1° C.

3. Cards: Each turn, you may draw one card. Cards are divided into numerical cards and rule cards.
Numerical cards: Drought\Frost×5, Warm\Cold Period×5.
Rule cards: Climate Inertia×3, El Niño×3, Paris Agreement×3, Climate Resilience×3.

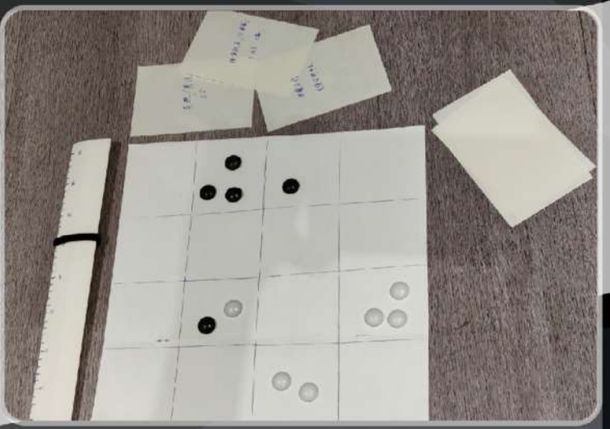

DETERMINE THE VICTORY CONDITIONS

1. After filling the board, calculate the survival control area. The side with the higher score wins. If scores are tied, the side closer to the temperature wins.

2. Black Daisy: Lower the temperature below 0° C and maintain it for 3 turns.
White Daisy: Raise the temperature above 40° C and maintain it for 3 turns.

3. One side eliminates all of the other side's daisies.

STEP 1

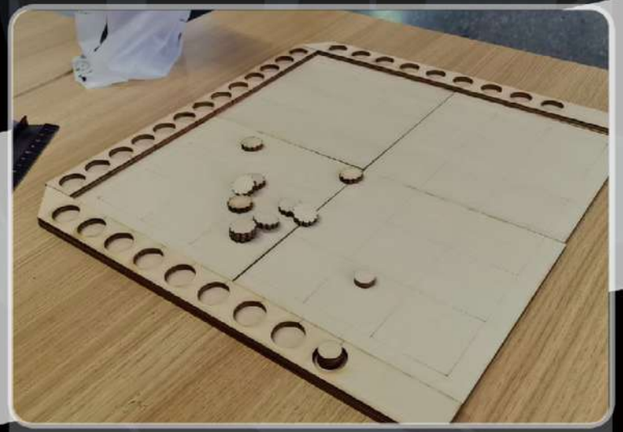

SYSTEM MODIFICATION

1. Action Point System Added: Each turn, both players have 1 action point. Planting/removing/moving daisies (1 point), destroying an opponent's daisy on a tile (1 point), using a card (1 point).

2. The Card-Drawing Mechanism Changed: Both players start with one card in the first round. Subsequent rounds require spending action points to draw cards, with a maximum hand size of five cards.

3. The Occupation Rule Changed: A complete occupation is achieved when three daisies of the same color occupy a single square. If daisies of different colors coexist in the same square, you may spend 1 action point to remove the opposing daisy and calculate the temperature benefit.

STEP 2

THE VICTORY CONDITIONS CHANGED

1.When the temperature cursor reaches the orange terminus, the white daisy wins; When you reach the blue end, the black daisy wins.

2.When the temperature verifier is on the left edge and there are no black daisies on the field, the white daisies win; When the temperature rover is on the right side and there are no white daisies on the field, the black daisies win.

NUMERICAL ADJUSTMENT

1. Action Points: Each turn, both players have 2 action points. Discarding 1 card grants 1 point.

2. Temperature System: The global temperature ranges from 0 ° C to 40 ° C, with an initial temperature of 20 ° C (neutral state). Each removed black/white daisy ±2° C.

3. Cards:
Modification: Warm\Cold Period×5, Climate Resilience×5, Climate Inertia×5, El Niño×5.
Addition: Hurricane×5, Expansion×5.
Deletion: Paris Agreement.

STEP 3

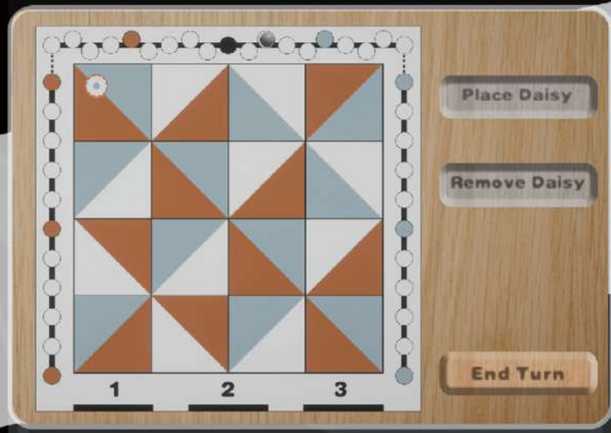

MATERIAL SELECTION

Game Board: Foldable tabletop game board.
Black and White Daisy Pieces: 2cm × 8mm wooden pieces + waterproof decals.
Neutral Pieces: Wooden carved humanoid pieces.
Cards: 62mm × 100mm blue-core playing cards.
Action Point Tokens: 2cm × 4mm round wooden discs.

TESTING

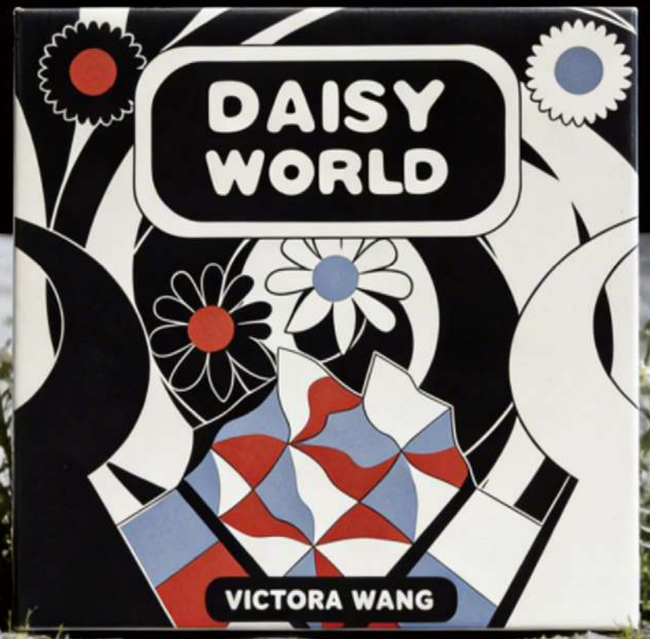

STEP 4

DEVELOPMENT OF THE DIGITAL VERSION

Implement the chessboard system and the hand card system, and enable offline human-computer battle functionality. The remaining features are still under development.

FINAL SHOW

Designed by VICTORIA WANG

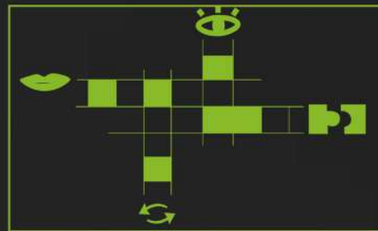

If a person realizes that each of her days is just another night, that her two eyes are equal to one of others' eyes, then she will strive for the true day, and this day will bring her a complete awakening, a complete awakening from the awakening, when everything is far clearer than when she was awake.

For the digital version, please visit: https://victoria-wang.itch.io/julia
For the introduction video, please visit: https://youtu.be/hTYDAoB8uUA

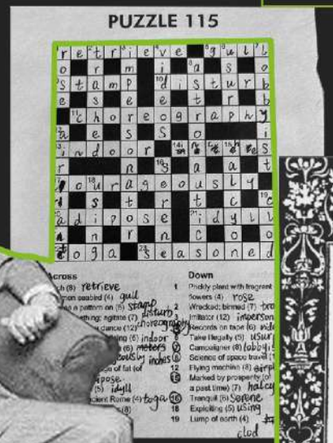

INSPIRATION

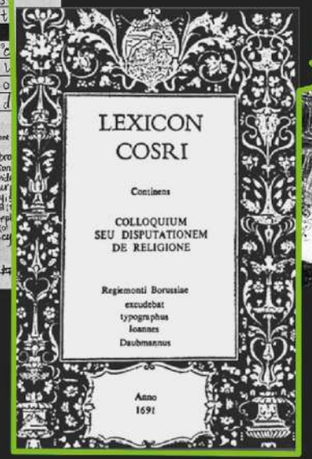

The game is inspired by many things. Contains elements of puzzles, mazes, language, surreal and many more. Includes aspects of plot, mechanics, and art style.

GAME MECHANICS

Crossword puzzles, commonly found in newspaper centrefolds, transform words into a vehicle for puzzle-style play, and the story of the Tower of Babel alludes to the natural properties of language as a riddle. Inspired by the collection of words as the primary gameplay for solving puzzles.

PLOT

Both Borges' work and Dictionary of the Khazars organise their plots in a labyrinthine narrative that allows a story to vary according to the reader's choices.This feature coincides with the game's branching choices. The narrative is inspired by the use of fragmented narratives centred on words.

ART STYLE

The collage art and montage techniques fit the fragmentary, stream-of-consciousness narrative mode, giving people a psychedelic, psychological feeling between the virtual and the real, which fits the theme of the game. Therefore, collage and montage are chosen as the main art style of the game.

SUMMARY

SYNOPSIS

You awaken from a dream, realizing you have lost all your memories. However, you distinctly remember there is an important task to accomplish. You find yourself in a labyrinthine dream, where the vocabulary serves as a compass to guide your direction.

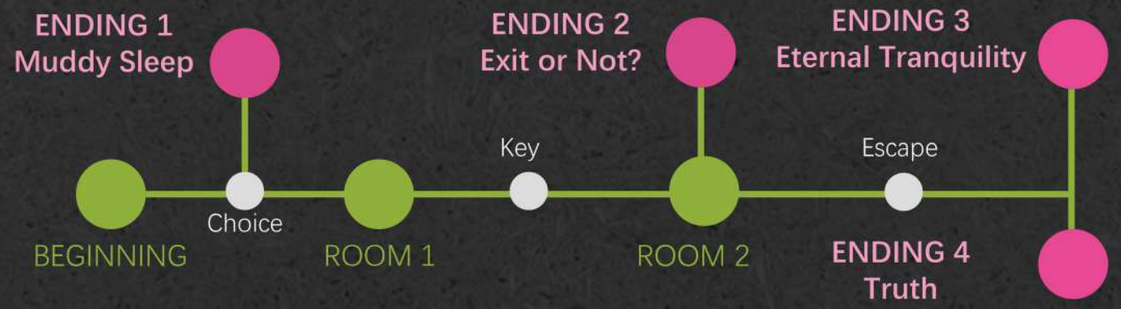

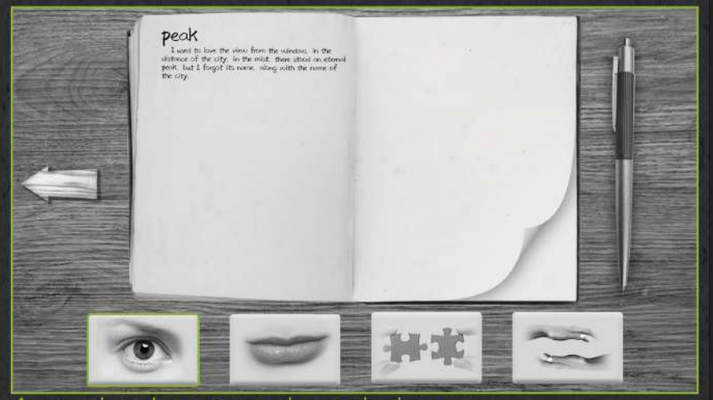

Collect vocabulary in the room and use the notebook's vocabulary conversion function to get new vocabulary. New vocabulary can spawn new items, or you can place them on the clue board to get new clues. Find a way out of the room and look for memories.

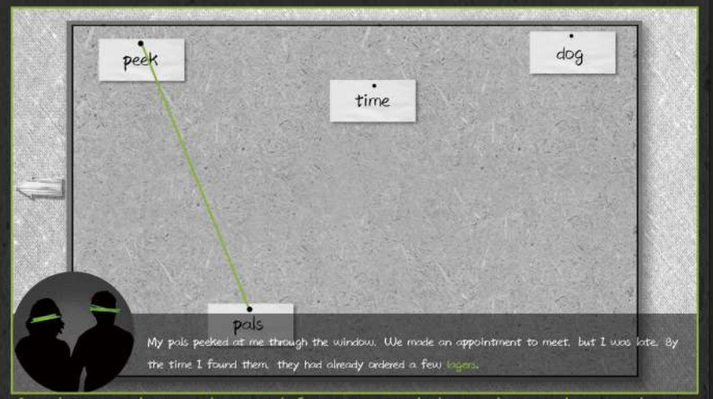

Ultimately, the time has come for a decision. Will you choose to escape, or... confront the truth?

UI DESIGN

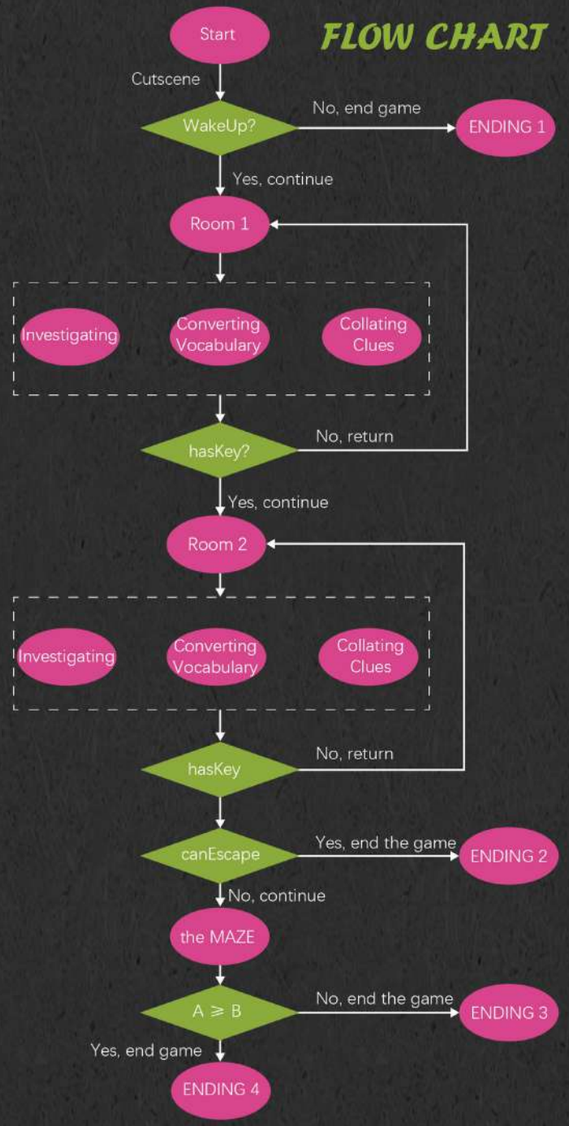

A notebook to record vocabulary.
Four workbenches for converting words.

A pin-up board used for organizing thoughts, where the correct connection of vocabulary can yield new information.

SYNOPSIS

FLOW CHART

PLOTS

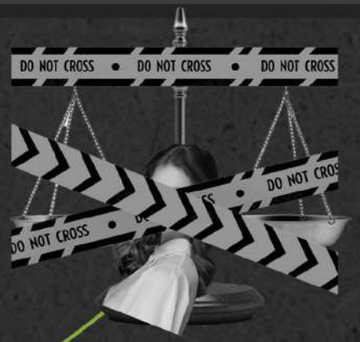

A woman who has lost all her memories wakes up in her room and the only thing she remembers is that she is a writer. Will she choose to find the truth, or will she wait for this nightmare to pass?

ENDING 1

She decided to wait for the nightmare to pass and closed her eyes again. But was it really just a nightmare? Would it ever end? In any case, she would never dream again.

ENDING 3

She woke up, completely. She finished it all. A perfect ending. Good had spoken, evil had been brought to justice, it was over, and peace had truly returned to her life.

She recalled something light, pleasant, and sweet. Life with her mother as a child, parties with friends, her writing career, or a man .....

In clues deep beneath the surface, she thought of more. Something dark and frightening emerged, and she remembered what she was looking for, didn't she?

ENDING 4

A perfect dream or a brutal truth? She was a woman of courage, always choosing the tougher one. the title of the book Now, no matter how the plot will unfold, the curtain has fallen on the drama that belonged to her. The truth is always the same, and the good thing is, both she and you can rest.

ENDING 2

Finally, she found the key to the door. It was an exit back to a peaceful life, and she walked out and lived as she always had, nothing had changed. Except, is that all there is to the story?

UI DESIGN

THE ROOM

The main investi-gation area will be presented as a room, and objects in the room can be interacted with by clicking on them.

Some scenarios have small scenes that can be investigated. Click on an object to zoom in, and click on a blank space to return to the room scene when you're done investigating.

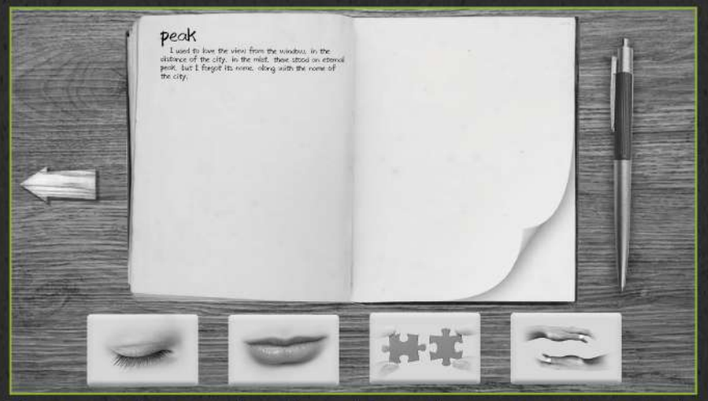

Left and right arrows switch room scenes.

Investigable objects will show a green outline line.

THE NOTEBOOK

The vocabulary words collected from the survey will appear in a notebook. The four workbenches at the bottom allow you to convert words to get new words.

This workbench converts words into words with similar spelling.

This workbench converts words into words with similar pronunciations.

This workbench combines or splits words.

This workbench reverses the spelling of words.

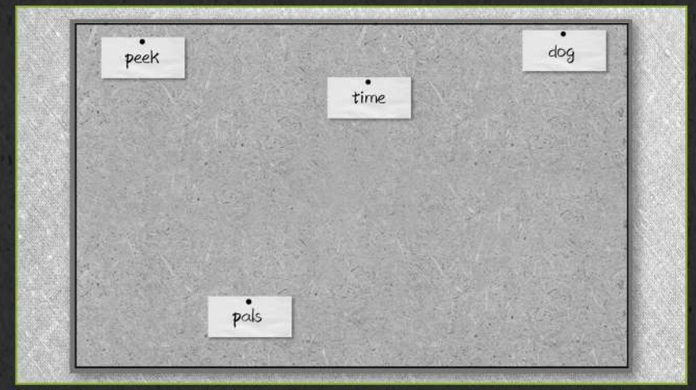

Drag words to the workbench to convert them.

Click on the folded corners to turn the page.

THE PIN-UP BOARD

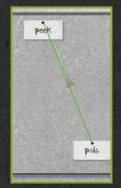

Words that are linked to each other will automatically appear on the board.

Click on two words to connect them, and if there is a link between them, a connecting line will appear on the board.

Click on an existing link to view the contents of the clue corresponding to the link.

When new clues appear, a dialogue bar appears at the lower end of the board, and new vocabulary found is highlighted in green and recorded into the notebook.

DIAGRAM

GLOSSARY

peak	peek	pique		
peek		pique		keep
time		Thyme	timetable	emit
diary	dairy			
dairy	daily			
dessert(s)	desert			stressed
drawer				reward
laptop			lap\top	
top				pot
keyboard			key\board	
plug				gulp
flower		flour		
write	white	right		
...				

PROCESS FLOW

Click on an object to interact with it.

The collected word will appear in a notebook.

Drag the word into the tool-bench to get a new word.

Some new words may appear on the clue board and connecting related words will result in new clues or words.

New clues or words will appear in the notebook.

Sometimes, new words are accompanied by new interactable objects in the room.

DEVELOPMENT

SYSTEM DESIGN

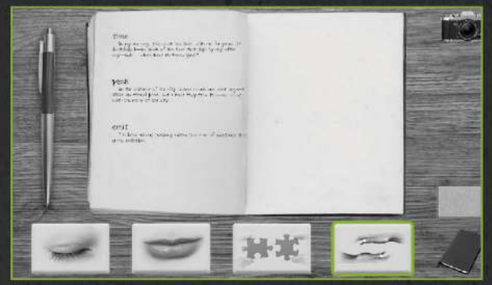

The settings include volume, sound effects and achievements.

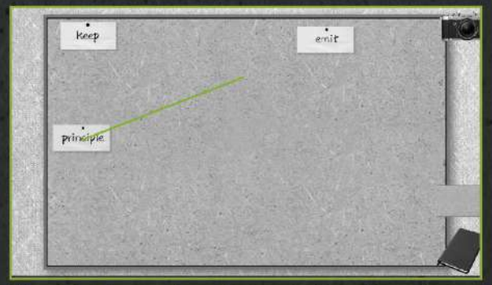

The save system has 6 slots, and the 1st slot is the default new save.

The scene system includes 6 switchable scenes.

The word collection system includes a notebook and workbenches.

The clue board and connecting lines feature have been implemented.

The guide, hints, and achievement system.

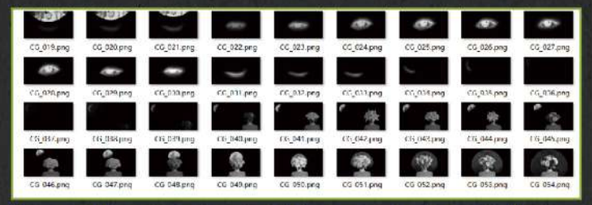

ART AND COPYWRITING

The art style adopts a collage approach to evoke a sense of surrealism. To indicate that the protagonist is deceased, black-and-white visuals are employed. All art assets are created using Photoshop.

The opening animation is created using frame-by-frame animation, approximately 140 frames, all of which are assembled using Photoshop collages.

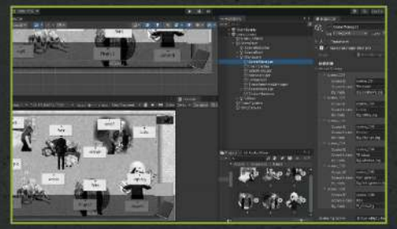

Due to the game's use of fragmented storytelling, copywriting becomes difficult. Ultimately, a complete story is constructed by listing items and words one by one to establish connections.

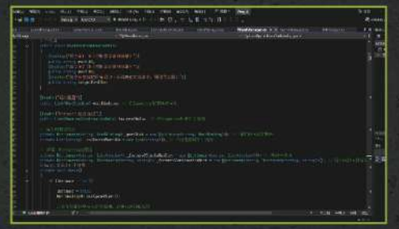

PROGRAMING

The program part is developed using the Unity engine and uses AI-assisted programming.

FEEDBACK

After finishing the demo, invite some friends from different backgrounds to try it out and give feedback.

Hemiit E.C.(Game Developer)

It is recommended to increase the opacity of the dialogue box and darken its color (make it less transparent) to avoid background scenes interfering with the visual recognition of text. It is also suggested to add interactive animations, such as various feedback when dragging and placing items.

Chocolate002(Visual Novel Enthusiast)

I like this story and its art style, but the positive feedback it gives me is a bit weak. I hope there could be more collecting or interactions to let me know I'm making progress in the game.

Winter Feast(Puzzle Game Enthusiast)

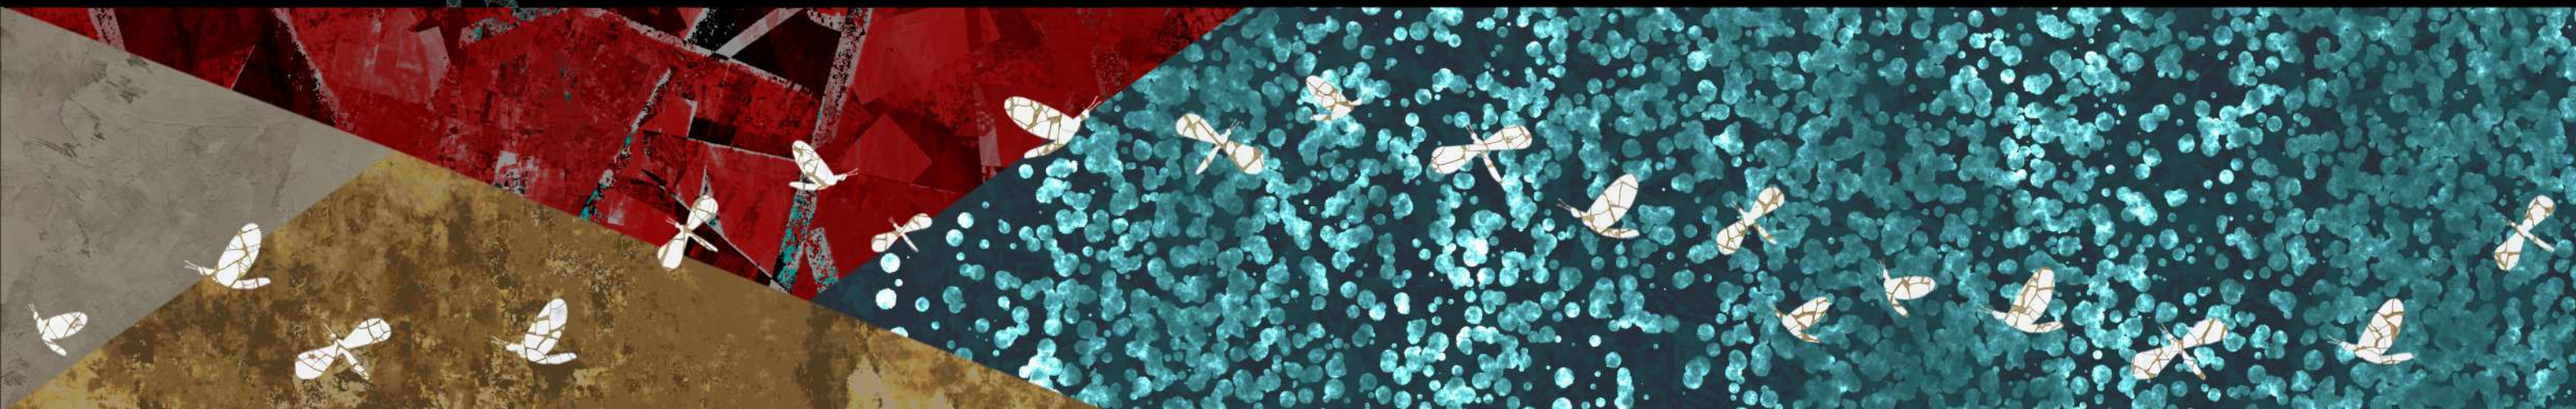

I like the design of the connection board and the word puzzle games at the end. I hope there can be more similar mini-games. Some word combinations are too difficult, maybe adding some hints would be better.

MAYFLY

Designed by VICTORIA WANG

For more art assets, please visit: https://victoria-wang.itch.io/mayfly

INSPIRATION

EXECUTIONERS

The film tells the story of three female warriors searching for water and fighting against evil forces in the aftermath of a nuclear explosion.

Character Design, World View

Worldview, Combat System

LOVE, DEATH & ROBOTS

The animated short film consists of 18 parts, each lasting 5-15 minutes. The illustrations show the science fiction-themed Three Robots and Good Hunting.

Character Design, Worldview, Storyline

NUMEROLOGY

Numerology, also known as divination, is an ancient system of divination.It uses mathematical reasoning to predict the fortunes and misfortunes of people and events, and is a core component of traditional Chinese mystical culture.

CORE GAME SYSTEM

STATUS

The status system includes health, mana bars, buffs and debuffs, as well as special states caused by skills.

EFFECT

EFFECT

SKILLS

Taiyi Qimen Liuren

The skill system is based on numerology and revolves around the three-form system. It includes three skill groups: Taiyi, Qimen, and Liuren, along with the synergistic effects

EFFECT

EFFECT

EQUIPMENT

The equipment system includes weapons and armor, and different weapons and armor have different effects.

Cold Weapons Firearms Helmets Chest Armor

...

COOPERATE

COOPERATE

EFFECT

UNLOCK

ENHANCE

RESOURCE

Spirit Beads Coins Potions Materials

...

The resource system includes various resources obtained within the game, such as map fragments, enhancement and synthesis materials, and battle consumables.

STATUS SYSTEM

The status bar consists of a health bar, a mana bar, and a buff/debuff bar. There is no character level system.

HEALTH BAR

- HP is fixed at 1000 pts, and is unaffected by combat status.
- HP cannot regenerate automatically, but can be restored using skills and potions.
- Maximum health can be increased through equipment.

SKILL BAR

- SP has a total of 100 pts, shared among all skills.
- SP can automatically regenerate: 2 pts/s in combat to prevent skills from being used too frequently, and 8 pts/s out of combat to accommodate resource reset needs between battles.
- SP can be replenished faster with potions. Certain skills can reduce the SP cost of other skills or speed up SP recovery.

STATUS BAR

- Players have 3 types of statuses: buffs, debuffs, and skill combo states. Different statuses can stack.

Debuffs: red icons

Buffs: white icons

The skill combo status will be explained in the skill system.

SKILL SYSTEM

The skill system is built around 3 types of divination: Qimen, Taiyi, and Liuren. These are officially recognized Chinese divination systems, collectively known as the Three Methods, and are used to predict the timing, geographical advantage, and human relations, respectively.

Taiyi

Taiyi is the name of the Wood God and is now mainly used to predict the fortune of a nation.

The Taiyi skill set includes the following features:

- Self global buff / Large area effect
- Consumes a moderate amout of SP, about 14-20 pts/skill
- Wood element damage

Skill Icons Overview

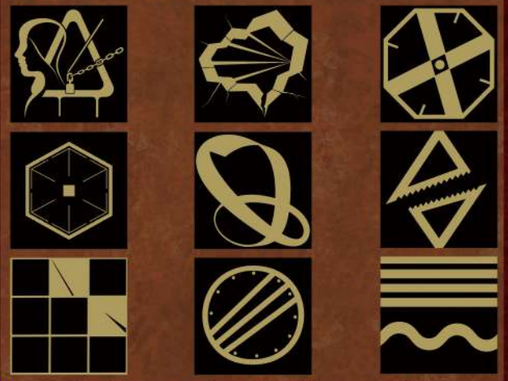

Qimen

Qimen uses the patterns of time and space to predict military affairs and select auspicious dates.

The Qimen skill set includes the following features:

- Trap / Formation / Control
- Consumes a large amout of SP, about 22-28 pts/skill
- Earth element damage

Skill Icons Overview

Liuren

Liuren regards water as the source of all things and is used to predict all matters in the human world.

The Liuren skill set includes the following features:

- Single target / Small area output
- Consumes a small amout of SP, about 8-16 pts/skill
- Water element damage

Skill Icons Overview

According to the relationships of the Five Elements, the combo of different skill sets can produce different status.

After using Taiyi skills, enter the Heavenly Timing state for 8s, during which Qimen skills receive a boost.

After using Qimen skills, enter the Advantage of Terrain state for 8s, during which Liuren skills receive a boost.

After using Liuren skills, enter the Harmony among People state for 8s, during which Taiyi skills receive a boost.

EQUIPMENT SYSTEM

Equipment is divided into 2 types: weapons and armor.

WEAPONS

Weapons are divided into cold weapons (metal attribute) and firearms (fire attribute). According to the laws of the Five Elements, they provide beneficial effects to skills of different attributes.

Cold Weapons

- Melee Combos
- Critical Strikes / Swift Execution
- Metal damage:critical hit causes additional bleeding effect

Dagger
- High speed
- Small range
- Weak power
- Low crit

Greatsword
- Moderate Speed
- Moderate range
- Moderate power
- Moderate crit

Axe
- Low speed
- Wide range
- High power
- High crit

Katana
- Moderate Speed
- Moderate range
- Weak power
- High crit

Firearms

- Ranged Burst
- Armor Penetration / Splash Damage
- Fire damage:critical hits cause explosive or burn damage

SMG
- High speed
- Small range
- Weak power
- Low crit

Rifle
- Moderate speed
- Moderate range
- Moderate power
- Moderate crit

RPG
- Low speed
- Wide range
- High power
- High crit

MG
- Moderate Speed
- Moderate range
- High power
- Low crit

ARMOR

Armor is divided into 4 types: helmets, chest armor, skirts, and accessories.

Helmets
- HP/SP boost
- Critical hit rate increase

Chest Armor
- HP/SP boost
- Certain element resistance increase

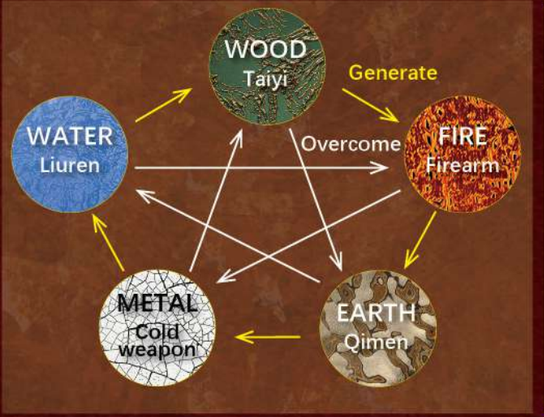

Skirts
- HP/SP boost
- Attack/movement speed boost

Accessories
- HP/SP boost
- Certain special effects

COOPERATION RULES

There are attribute-based synergy rules between skills and weapons, following the principles of the Five Elements.

SKILLS / WEAPONS			
	Metal overcomes wood: Null	Earth generates metal: For enemies within the range of Qimen skills, cold weapon damage and critical hit rate are increased.	Metal generates water: When yourself or enemies are affected by the Liuren skills, cold weapon attacks will cause bleeding effects.
	Wood generates fire: When yourself or enemies are affected by the Taiyi skills, firearm attacks will cause burning effects.	Fire generates earth: For enemies within the range of Qimen skills, firearm attacks deal additional explosive damage.	Water overcomes fire: Null

RESOURCE SYSTEM

There are 6 types of resources in the game.

Coins

A special coin-shaped battery.Possesses a certain amount of energy and functions as currency. Can be used in the shop and the forge.

Spirit Beads

Spirit beads imbued with a special energy field. They can be used for skill learning, as well as in the shop and the forge.

Materials

Materials, including efined materials which can be used to forge weapons and equipment, and synthesized materials which can can be used to synthesize potions, can be obtained or sold in the shop.

Weapons

Can be equipped in weapon slots. Attributes can be viewed in the backpack. Can be upgraded or sold at the forge.

Armor

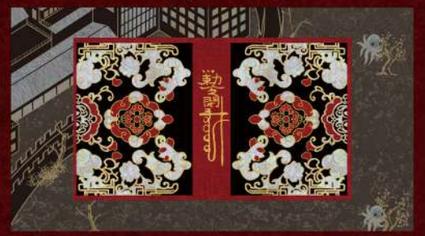

Armor provides players with bonuses, with a maximum of four pieces that can be equipped. It can be upgraded or sold at the forge.

Potions

Potions possess various functions. They can be obtained directly through adventures or purchased from shops, or crafted using materials.

Resources are generally obtained through combat.

After each area battle concludes, a lacquer box will appear. Click to open it and view the loot you've obtained.

Resources can also be obtained through systems such as the shop, forge, and achievements.

OTHER SYSTEMS

CHARACTER PANEL

The character panel simulates an opened lacquer box, divided into 3 sections.

The left section is the equipment panel. It includes character portraits, equipment (weapons and armor), and the map. The player can equip 1 set of armor and 2 weapons at a time.

Click the compass icon to open the map.

The top row shows the currently equipped skills, up to 6. Below that are the remaining skills. Clicking the skill set icons will collapse or expand the set.

Black icon
Not acquired

Gray icon
Equipped

Colored icon
Not equipped

You can learn up to 27 skills.

The right section is the warehouse panel, where resources obtained from battles, trading, forging, and other activities are stored. Identical items can be stacked, and each page can hold a total of 20 item slots.

Click the pull tab on the far right to turn the page.

AUXILIARY SYSTEMS

The auxiliary systems mainly include the forging system, the shop system, the guidance system, and the achievement system.

FORGING SYSTEM

In the forge shop, you can use spirit beads, coins, and materials to craft, upgrade or decompose equipment.

Consumables:

Forge Shop Manager

SHOP SYSTEM

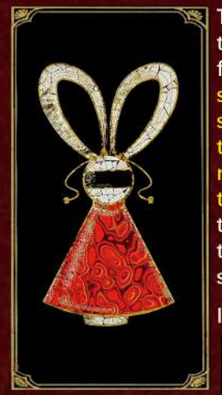

In the shop, you can use coins to buy potions and materials, or sell potions and materials to get coins.

Tradable items:

Shop Manager

GUIDANCE SYSTEM

The guidance system can help you follow the main storyline, unlock skills, and explore the map. Some materials or potions can be synthesized through the guidance system.

Involved items:

Forge Shop Manager

ACHIEVEMENT SYSTEM

Completing tasks in the achievement system will earn rewards. Some special weapons or armor can only be obtained through the achievement system.

Involved items:

Character

DEMONSTRATION

ENCOUNTER BATTLE

Hostile units will randomly spawn in the outdoor areas of the map, and killing them will drop a small amount of resources.

Use skill combos to fight.

Use the Qimen skill to lock the enemy and stack the Advantage of Terrain status.

Use the Liuren skill to gain a buff and stack the Harmony among People status.

Use the Taiyi skill to gain a buff.

Use the combination of skills and weapons to fight.

When using the firearm to release the Taiyi skill on an enemy, it will cause a burning effect.

Burning effect: Causes ongoing damage, reduces resistance to firearm attacks.

Release Taiyi skill via the firearm to cause burning effects.

Release Qimen skill via the firearm to cause additional explosive damage.

When using the cold weapon to release the Liuren skill on an enemy, it will cause a bleeding effect.

Bleeding effect: Causes ongoing damage, reduces resistance to cold weapon attacks.

Release Liuren skill via the cold weapon to cause bleeding effects.

Release Taiyi skill via the firearm to stack the Heavenly Timing status.

BOSS BATTLE

At the end of each main quest location, there is a boss room. Entering the boss room will trigger a boss battle.

When the boss is at 100% HP to 50% HP, it enters Phase 1. Attacking the arms will cause them to fall and lose their attack method.

When the boss is at 50% HP to 10% HP, it enters Phase 2. The way of attacking will change.

When the boss is below 10% HP, it enters Phase 3. The way of attacking will change. Meanwhile, attack power and attack speed will be increased.

Light House

Designed by VICTORIA WANG

After escaping terror,
the real terror lies ahead.

For model assets, please visit:
https://victoria-wang.itch.io/lighthouse

INSPIRATION

SETTING

Solaris

A literary work by Polish science fiction author Stanislaw Lem. It depicts a mysterious ocean capable of materialising the private thoughts and dark impulses within the human mind.

PLOT

My Dream

A group of people found themselves trapped within a lighthouse-like facilit. Periodically, water would flood the structure, and as the tide receded, one person would vanish.

HORROR

Rules Horror

Weird rules constitute a distinctive literary genre, typically presented in the guise of regulations, bylaws, or brief notes. Readers must then deduce the sequence of events and uncover the truth within this distorted framework.

ARCHITECTURE

The Nakagin Capsule Tower

The Bank of China Capsule Hotel is a collective residential building situated in Tokyo's Ginza district. As the most renowned example of Japan's Metabolism architectAural movement, it displays a strikingly futuristic style and science-fiction-like conception.

BACKGROUND

Inside **Lighthouse**, a surface base on an alien planet, the sole survivor awakens, having lost much of his memory. As he explores, he discovers himself torn between two sets of rules:

AI Minerva's **sterile treatment** is actually an elimination program targeting mutated individuals;

while the Ocean Consciousness forges escape guides in red text, luring him into voluntary fusion.

The protagonist's cognitive contamination is irreversible—whichever side he chooses, the end of his human identity awaits him.

What will he choose?

The red text

The red text is the physical trace of the alien consciousness's infiltration, existing in a warm, viscous liquid form. It can evade Minerva's monitoring and forge **rules** and **diaries** brimming with human fear and the will to survive by mimicking the victims' handwriting and tone. It is both the key to uncovering the concealed truth and the poison that lures survivors into embracing assimilation voluntarily.

SYSTEM DESIGN

CSI System

The **CSI** (Cognitive Stability Index) is the most important status value in the game.

Positive CSI: The player trusts the claims of the AI **Minerva** and believes the base is safe, but will miss many hidden clues and the truth.

Positive CSI

Negative CSI: The player starts to see the **truth** of the world, yet will also face more direct horrors and become a target for pursuit.

Negative CSI

Drinking the **Red Beverage** is a pivotal choice that changes the gameplay.

Before drinking it: The player's **CSI** will be no lower than 0. The player needs to evade a monster called **the Shadow** and manage their CSI.

Scene before the player drinking Red Beverage

Once consumed: The player's CSI will permanently turn negative. The advantage is that they can see all hidden information to advance the plot; the disadvantage is that they will be permanently hunted by robots called the Sentinel and will no longer be able to use Energy Elixir.

Scene after the player drinking Red Beverage

The CSI directly drives the survival gameplay and the ending.
In dangerous areas, the CSI will keep decreasing. If it drops too low, it will trigger a **Shadow** chase sequence.

Time & Save System

The game features a hard time limit of **7** in-game days. Once the countdown ends, the finale will be triggered automatically.

Players have only **6** manual save opportunities throughout the entire gameplay, and saving can only be performed in the Personal Quarters. Save points are not just progress checkpoints, but also critical strategic resources—players must carefully plan when to use them).

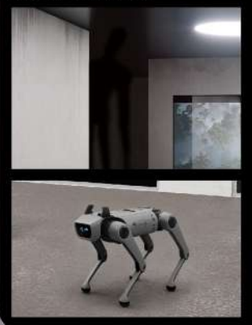

Player's Personal Quarter: In-Game Save Point

Explore and solve puzzles within the specified time limit to find the hidden path that breaks the forced finale.

Exploration & Threat System

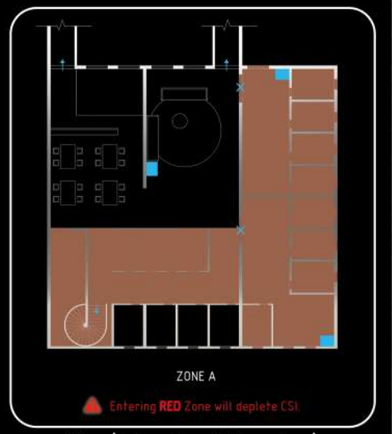

The map is split into AI-controlled Zones (relatively safe) and Entity-contaminated Zones.
The map is split into **AI-controlled Zones** (relatively safe) and **Entity-contaminated Zones**. Inside contaminated zones, CSI will continuously deplete on its own, creating an intense pressure of **cognitive attrition**.

Dual Threats

The Shadow: When CSI drops below a specific threshold, these entities will materialize and trigger a chase sequence—players must flee the area at once.

Sentinel-Prime Robots: These units will be permanently activated to actively hunt down players after they consume Red Fluid and their CSI turns negative.

Map(Standard Version)

Resource System

Key Items

Energy Elixir: Usable only when CSI is positive. It can restore or maintain positive CSI, serving as a safeguard to delay cognitive collapse and enable safe exploration within contaminated zones.

Energy Elixir

Red Beverage: Consuming it will permanently send CSI into a negative state. It can also be used as a **booster**: actively drinking it while CSI is negative will drastically enhance perception in the short term (unveiling more truths), but it will accelerate CSI depletion and amplify incoming threats.

Red Beverage

Fake Energy Elixir

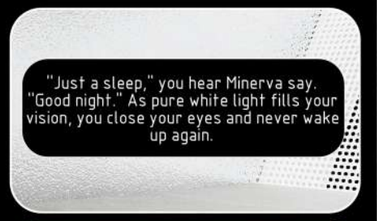

Ending System

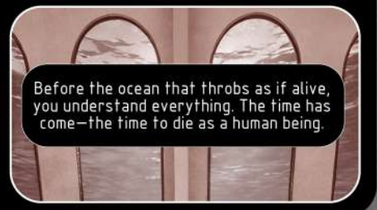

Forced Endings

At the end of Day 7, the outcome is determined mandatorily based on the final CSI value:
CSI ≥ 0: Sanity remains intact, yet contamination is irreversible. Minerva transfers you to the Advanced Sanitarium and erases your consciousness.
CSI < 0: Minerva designates you as a **Contamination Source** and initiates physical elimination.

Hidden Ending

By fulfilling a series of complex conditions within the time limit and making specific choices, you can trigger the true ending that transcends the two outcomes above—it is the ultimate objective of the game.

PROCESS

The game lets you save seven times in total, and each save represents one day passing. The process is roughly divided into three stages:

DAY1

Familiarize yourself with the gameplay and story, and conduct initial exploration

DAY2

The appearance of the Red Beverage marks the branching point of the story

DAY3-6

Drink the Red Beverage?

No → Gather information, unlock other zones, and evade the Shadow

Yes → Drink the Red Beverage, and the Shadow will no longer be hostile, while the Sentinel-Prime Droids turn hostile. → Gather information, unlock other zones, and evade theSentinel-Prime Droids

Key information fully collected?

No → CSI < 0?

- No → ENDING1 Advanced Sanitarium: You are humanely euthanized by Minerva.
- Yes → ENDING2 Contamination Source: You were eliminated as a monster.

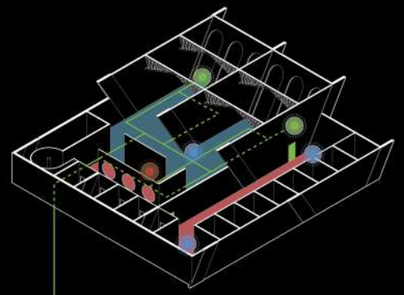

Yes → CSI < 0?

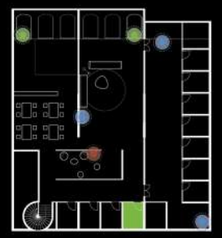

- No → Flee to the tower?
  - No → ENDING3 No Escape: You decide to return to Minerva and face purification and death.
  - Yes → ENDING5 Death of a Nameless: In this fake lighthouse, you choose to die as a human being.
- Yes → Flee to the tower?
  - Yes → ENDING5 Death of a Nameless: In this fake lighthouse, you choose to die as a human being.
  - No → ENDING4 Welcome Home: You felt the planet. This time, you did not resist.

DAY7(Ending)

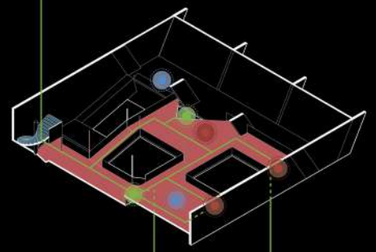

MAP DESIGN

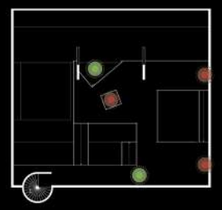

As exploration progresses, different areas of the map will be unlocked. For example, the distribution of interactive resource points unlocked on the first day is shown in the figure:

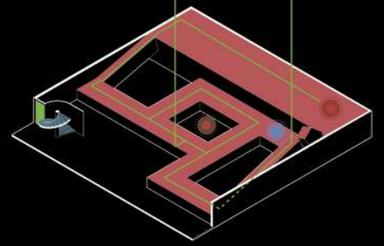

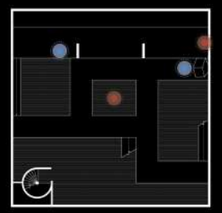

The first floor is the lounge. The green room at the bottom right of the floor plan is the resting room. No matter the current state, entering this room will immediately save the game, reset the state, and move on to the next day.

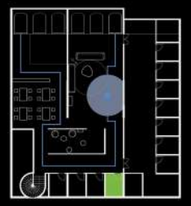

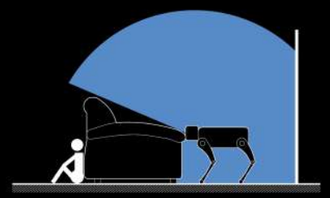

The entire basement is a contaminated area. The player can go down via the spiral staircase.The CSI keeps dropping when in a contaminated area. Drinking energy elixir, which can be found at marked spots, will restore the CSI.

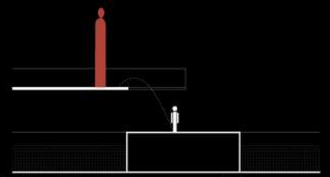

- Contaminated items
- Energy Elixir
- Other interaction points

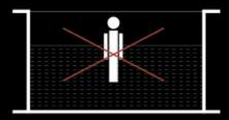

When CSI is less than 0, the player will be attacked by **Sentinel-Prime Robots**. They have set patrol routes and detection ranges. Once they detect an infected person, they will leave their route and speed up to chase them until the infected person gets out of range or is eliminated. Their detection beams can be blocked by furniture or walls.

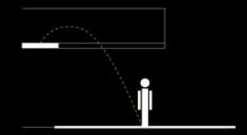

When **the CSI** drops below **50** and the player is in a contaminated area, **the Shadow** will respawn near the nearest contaminated object to the player. **The Shadow** will keep chasing the player until he restore his CSI or leave the contaminated area. The shadow can only walk on the ground, so the player can quickly create distance by jumping off platforms at gaps in the railings.

Falling into the pool without drinking the red beverage will lead to death.

Crouching can help you avoid the robot's detection.

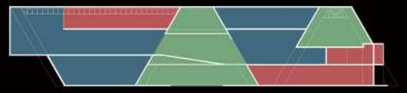

You can jump down from certain gaps, but you can't jump up to high places.

SPATIAL DESIGN

The spatial design takes into account the atmosphere needed for the story and is roughly divided into 3 types of spaces:

Entity-contaminated Zones: These kinds of spaces will corrupt players and spawn entities, so they're pretty dark and chaotic, giving people an unsettling feeling.

AI-controlled Zones: These kinds of spaces symbolize safety and control, so they're bright and modern, while also giving off a sense of being watched and a bit of an inorganic feel.

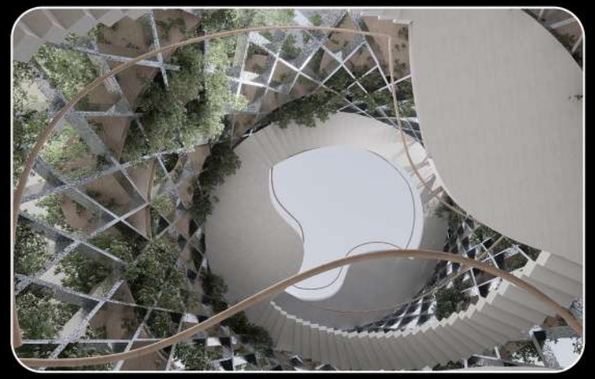

The Tower Light House: This space carries the climax and ending of the story. The sequence of spaces aligns with the player's psychological changes. It has a surreal atmosphere.

The Tower *Light House*

When the player is in the lead space, the light focuses on the main body of the tower, giving a sense of hope.

The spiral staircase ramps up the player's anticipation for a successful escape.

The vertical upward space suddenly opens into a horizontal space.The player has nowhere to escape.

Entity-contaminated Zones

The lighting is dim, the space is low and cramped, which feels uncomfortable mentally.

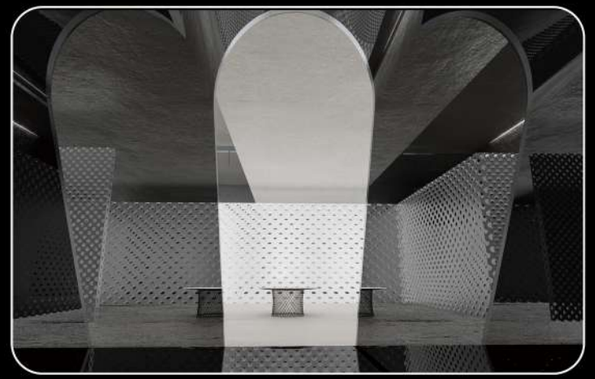

The space is relatively enclosed, with obvious signs of corrosion, stains, and traces of human activity.

AI-controlled Zones

A space that's too tall gives off an inhuman sense of scale and has a cold, technological vibe.

The space is tidy and bright, with few signs of human activity, giving a sense of distance.
